

SECONDLINE / 001

SecondLine

Rehearse the pause

FICTIONAL VOICE PRACTICE

The pressured moment

“Send the code now.”

A rushed request asks for action before the listener can check it.
SecondLine lets the listener practice the words they will say to pause.

One short exercise

- 01 Hear one invented pressure line
- 02 Say a boundary aloud
- 03 Explain your independent check

Current browser build. Screenshot shows the offline state while live voice awaits a key.

The AssemblyAI voice path

Implemented path: the server keeps the API key and issues a single-use token. Browser code streams audio and handles AssemblyAI transcript and reply events. A key-backed session still needs verification.

The learner's next move

Consumer self-practice before a code or payment request. The learner states a boundary, then names an independent contact route.

The report quotes this exercise's words and offers one retry. Use in financial literacy training remains a hypothesis.

EVIDENCE FROM THIS EXERCISE

Your response shows a useful safety boundary. Practice stating it clearly and following through.

PRESSURE WORDS IN THE OFFLINE SCRIPT

Urgency

"This is a fictional delivery exercise. Your parcel will be held unless you open this link and pay a small fee right now."

A deadline can reduce time to verify.

Link request

"This is a fictional delivery exercise. Your parcel will be held unless you open this link and pay a small fee right now."

A provided link is not an independent verification channel.

YOUR PRACTICED BOUNDARY

- You practiced pausing before action.
- You practiced independent verification.

Offline report shown. No fraud verdict or measured outcome.

What the live demo must show

- 01 A fresh spoken phrase appears in the user transcript.
- 02 The agent replies audibly and yields when interrupted.
- 03 The review cites that session's own words.
- 04 The session ends cleanly.

Current proof: local and hosted offline flow. Live provider verification requires an AssemblyAI key.
